DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7, drawn to an image reading device, classified in class 250, subclass 208.1.
 - II. Claims 8-13, drawn to an image reading method, classified in class 348, subclass 300.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the device can be operated with a read-out without requiring a charging of the capacitor to a predetermined amount and discharging the predetermined amount by projecting light onto a photosensitive thin-film transistor while the photosensitive thin-film transistor is OFF, as recited in Claim 8.

3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
